Reasons for Allowance

- 1 Claims 1-28 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination fails to teach the claims invention of an explicit system and a classifier system based functionally operating on a system state dataset (typically a vector) wherein by a combinatory search procedure, a next test is determined to establish an objective weighted score whereby a profit module transforms the weighted score into a profit and further facilitates identifying the value associated with the next test. Using the results of this analysis, an implicit system is trained that provides quick reaction but approximate solutions.

The closest prior art (LaPointe, WO 97/29447) teaches neural networks in decision-making to identify important variables to evaluated observations and test results and to suggest alternative courses of action. LaPointe fails to teach the use of explicit systems operating on a system state vector in a combinatorial search with a payoff function to determine next step action and to then develop an implicit system to support rapid decision making

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
